

Simple Steps to Spa Care

POOL CARE SOLUTIONS

What you may need:

- pH Decreaser or Increaser
- POOL BARON'S pH BALANCER
- SPARKLE SPA SHOCK
- SPA PERFECT
- Total Alkalinity Adjuster
- SPARKLE INITIATOR
- FROG FLOATING SYSTEM
- SPARKLE SPA CLARIFIER

Before you begin, acquire a good test strip or kit that will test for pH, Total Alkalinity and Bromine. Be sure to perform the tests twice a week to ensure proper water chemistry.

Steps to a clean, clear, sanitary spa:

1. *pH & Total Alkalinity Balance* - Balance is critical! Maintain pH between 7.3 - 7.7 and Total Alkalinity between 80 and 130. Add pH Increaser, pH Decreaser, and Total Alkalinity adjuster per directions as needed.

TIP: A great way to protect from pH & Total Alkalinity fluctuations is to add a bottle of POOL BARON'S pH BALANCER each time your spa is refilled with fresh water.

2. *Initiate Fresh Water* - When the spa is first filled, add a 2 oz. packet of SPARKLE BROMINE INITIATOR and a 2 oz. packet of SPARKLE SPA SHOCK to create an initial bromine level.

3. *Sanitize with Bromine* - Use Bromine tablets either in the spa's automatic feeder or through a floating device such as the FROG FLOATING SYSTEM. Test the water and adjust the feed rate to maintain a Bromine level of 1.0 to 3.0 ppm.

4. *Oxidize to Remove Wastes* - Dissolved waste products tend to build up in spa water. These wastes must be eliminated via a weekly oxidation treatment. Add 2 oz. of SPARKLE SPA SHOCK (or use WHITE LIGHTNIN') for a typical 400 gallon spa.

5. *Eliminate Oils with Enzymes* - Enzymes are the perfect, natural way to keep the water clear and eliminate the build-up of oils. Use either SPA PERFECT or SEAKLEAR'S NATURAL ENZYMES on a weekly basis as per directions.

6. *Clarify* - Add SPARKLE CLARIFIER weekly as per directions to ensure sparkling clear water.

four months or whenever the spa is refilled with fresh water.

8. *Enjoy* - Select a liquid or crystal bath enhancer to add a refreshing aroma and make your spa experience complete. These products are compatible with the products you use to maintain water clarity and sanitation.

FILTRATION NOTE: Keep your filter clean and running in "filter mode." Clean the filter on a regular basis using SEAKLEAR FILTER CLEANER. Replace the cartridge filter after 1-2 years of use. It's recommended to drain and add fresh water every 3 months or anytime the water becomes excessively cloudy or has an unfresh smell to it.

Have Ozone? Ozone provides better water with less trouble. Ozone is a harmless, sweet smelling, natural sanitizer that reduces the amount of bromine required. Every spa benefits from an ozonator. Ask about one for your spa!
